

# Utilising Undergraduate Radiography Data at PCH

## OBJECTIVES

Currently, data collected annually by students is only used for their projects. This project aims to utilise the student's research to undertake inform improvement projects.

## SOLUTIONS

Formed a partnership with Cardiff University and cleared the project with R&D to allow work to be undertaken with students. Projects are being allocated to students in line with organizational priorities.

## BENEFITS

### Benefits One

Mutually beneficial for the department and the students.

### Benefits Two

Uses data which is already being collected, getting the most out of collected data and improving resource allocation.

### Benefits Three

Could inspire a range of improvement projects benefitting staff, students, and patients.

*"This improvement initiative really showcases the value that students bring to departments and the benefits of linking academia with clinical practice. We have found a resourceful way to make improvements that cover a range of topics from image optimization, to improving well being of staff. Each project is data driven and evidence based, with the improvements helping not only patients but also the workforce".*
