Avoidable, amenable & preventable mortality are classified according to ONS definitions;

avoidable mortality – deaths that are amenable, preventable or both, where each death is counted only once

treatable mortality - deaths that can be mainly avoided through timely and effective healthcare interventions, including secondary prevention and treatment

preventable mortality - deaths that can mainly be avoided through effective public health and primary prevention interventions

Deaths (annual averages) based on 2017-19 deaths divided by 3

The EWM index cannot be calculated where the number of EWD's is equal to zero or where there are a negative number of excess winter deaths.											
Provisional 2020/21 Unitary Authority data not available from ONS

Next Update: to be confirmed											
Method for calculating excess winter mortality											
Excess deaths											
The ONS standard method defines the winter period as December to March, and compares the number of deaths that occurred in this winter period with the average number of deaths occurring in the preceding August to November and the following April to July:											
EWM = winter deaths – average non-winter deaths											
This produces the number of excess winter deaths, which is then rounded to the nearest 10 for final data and to the nearest 100 for provisional data.											
Excess winter mortality index											
The EWM index is calculated so that comparisons can be made between sexes, age groups and regions and is calculated as the number of excess winter deaths divided by the average non-winter deaths:											
EWM Index = (EWM / average non-winter deaths) x 100

Note: Rates were not calculated where there were fewer than 3 deaths in a cell, denoted by (*u*). It is ONS practice not to calculate rates where there are fewer than 3 deaths in a cell, as rates based on such low numbers are susceptible to inaccurate interpretation. Rates which are based on between 3 and 19 deaths are displayed in tables but are denoted by (*u*) as a warning to the user that their reliability as a measure may be affected by the small number of events and ':' denotes data not available

¹ Perinatal deaths per 1,000 live births and stillbirths. Neonatal, postneonatal and infant deaths per 1,000 live births.
