

## **Freedom of Information Request: Our Reference CTHB\_43\_19**

### **You asked:**

Please could you provide a copy of the following guideline?

Primary Care Guideline for Management of Cows milk allergy  
OR/AND

Primary Care Guideline for the prescribing of Specialist Infant Formula

I am aware that the guideline has recently been reviewed.

The only version I can find on the internet and Cwm Taf website is dated 2012. "Guidance on the appropriate Use and Prescribing of specialist infant formula in primary care". This is clearly out of date.

### **Our response:**

The Guidelines being referred to are in the process of being reviewed and re-written but are not yet in a finalised format. The agreement of the South Wales Gastroenterology Network Group was that the iMAP Guidance would be used across South Wales (Can be found here: <https://www.allergyuk.org/health-professionals/mapguideline>) and that local guidelines would be drafted, as were required by the different health boards, to assist with local implementation of the iMAP Guidance. These local guidelines are still be finalised within Cwm Taf UHB
