

Freedom of Information Request: Our Reference CTMUHB_483_22

You asked:

Is it possible to have the number of patients (who identify as) male under 45 and women under 45 who have had any type of knee surgery within the last 2 years please.

Our response:

Please see provided in the table below the number of patients aged under 45, split by gender who have had an inpatient/daycase episodes for a knee procedure.

Inpatient/Daycase Episodes with a Knee Procedure		
Gender	2021	2022
Female	30	30
Male	56	74
Total	86	104

Please note where data is reliant on clinical coding, this traditionally has a completion timeline of three months in arrears – therefore the data for 2022 will be incomplete. Also, the levels of elective surgery throughout the Covid pandemic were limited.
