- Do you currently have plans to replace this system? - No
- Procurement framework – N/A
- Other systems it integrates with? - All National systems

For further information, please contact DHCW directly via the link provided above.

System definition:

Electronic Patient Record (EPR) – An electronic patient/health record is a digital version of a patient's paper chart.

Patient Administration Systems (PAS) – these are the core enterprise systems, containing a Master Patient Index, used by NHS trusts to enable them to know when a patient has arrived, who they are, who they were seen by, what treatment they received and what happened to them. This core functionality, needed by every trust, covers admission, discharge and transfer.
