

Freedom of Information Request: Our Reference CTMUHB_365_21

You asked:

With regards to the information provided below, please note the following:

- Patients may be from other Health Board areas not just the Cwm Taf Morgannwg area.
- The best calculation on lab result date of positivity used.
- Window of 28 days positivity of validity has also been used.
- The data is for patients that stayed one night or more on the ward.
- Patients may have been on same ward, but not the same bay of beds. This does not mean that a patient was placed directly in a bed next to a positive patient.

1. Between 1.10.20 and 28.2.21 how many individual admissions were made to Prince Charles Hospital?

9016.

2. How many of those patients tested negative for Covid-19 upon admission?

4682.

3. Of those negative admissions, how many went on to spend at least one night on a ward with a Covid-positive patient after the Covid-positive patient had been identified as positive.

2597.

As noted above:

- This data is for patients that stayed 1 night or more on ward.
- This does not mean that a patient was placed directly in a bed next to a positive patient. Patients may have been on same ward, but not the same bay of beds.

4. Between 1.10.20 and 28.2.21 how many individual admissions were made to the Royal Glamorgan Hospital?

8635.

5. How many of those patients tested negative for Covid-19 upon admission?

4114.

6. Of those negative admissions, how many went on to spend at least one night on a ward with a Covid-positive patient after the Covid-positive patient had been identified as positive.

2208.

As noted above:

- This data is for patients that stayed 1 night or more on ward.
- This does not mean that a patient was placed directly in a bed next to a positive patient. Patients may have been on same ward, but not the same bay of beds

7. Between 1.10.20 and 28.2.21 how many individual admissions were made to Princess of Wales Hospital?

10077.

8. How many of those patients tested negative for Covid-19 upon admission?

3106.

9. Of those negative admissions, how many went on to spend at least one night on a ward with a Covid-positive patient after the Covid-positive patient had been identified as positive.

1677.

As noted above:

- This data is for patients that stayed 1 night or more on ward.
- This does not mean that a patient was placed directly in a bed next to a positive patient. Patients may have been on same ward, but not the same bay of beds.
